Letter to the Shareholders

Dear Shareholders,

We are very happy with the results of the first half of 2016. During the first half of 2016, we were able to realize those projects which were delayed in 2015 and as such had resulted in a loss of revenues. The new automated engine inspection system was ordered in the second quarter of this year, having been postponed to 2016 due to the emissions scandal. In the semi-conductor area, technical approval of our pilot facility for wafer inspection has by now also been successful. Both orders are highly strategically and financially significant for NanoFocus AG.

The encouraging trend in our standard and laboratory equipment from 2015 continued in 2016. Successful structural work in the sales area created a solid basis for continuous, sustainable incoming orders thanks to our high-quality laboratory measurement systems.

Cylinder inspection system used in production-related activities

The order for the initial design and delivery of a line-related, automated 3D cylinder inspection system is an important step towards employing the NanoFocus AG measurement technology as an integral part of production. With this, we meet the increasing demand by industry to make the precise NanoFocus technology available for use in the immediate production environment, rather than in the laboratory only.

As a result, the provision and extensive approval process of this major facility have been key priorities in our business unit Automotive in 2016. We have also been able to increase our customer base in the automotive industry through the sale of laboratory equipment to leading international automotive manufacturers.

Innovative inspection system for wafer production

This innovative measurement system to optically inspect so-called probe cards is also a technological and strategic success for NanoFocus AG and was installed by one well-known manufacturer of semi-conductors in the first half of 2016. The μ sprint hp-opc 3000 is an extension of the μ sprint product line, which has been used successfully in the semi-conductor industry for years.

The new NanoFocus system is fully process-capable and improves efficiency in wafer production. The testing system also significantly reduces defect-related production costs even for a high number of items and measurably increases quality assurance. Accordingly, resonance in the semi-conductor industry is high. NanoFocus AG had both the intention and the opportunities to become further established as a provider to wafer manufacturers in the upcoming years.

Integration of Breitmeier Messtechnik GmbH

The first half of the year was characterized by the integration of our new subsidiary BMT. All the parties involved will continue to focus on this complex integration during the further course of the year - however the benefits of this strategic purchasing concept have already become apparent in the first months. Our customers view the addition of tactile systems and automation technology to our portfolio very positively, and several companies have requested Breitmeier products. The integration of BMT technology into the professional sales and service structures of NanoFocus has already led to first sales and new concrete sales opportunities.

»We have created the conditions to further increase sales and will utilize all our efforts to harvest these opportunities.«

Dipl.-Phys. Jürgen Valentin
Chief Technology Officer (CTO) and Spokesman of the Management Board

So far, the integration has focused primarily on infrastructure and technology. We were able to ensure compatibility between the different measurement systems. Not least, first successes of the new technical opportunities include the mutual development of the newly automated cylinder inspection system.

During the further course of the year, we will not only further promote technological cooperation but also establish joint product marketing and sales. Added to this are ISO certifications and the introduction of a CRM system at BMT, as well as a connection to the NanoFocus AG ERP system.

R&D project for automation technology

Automated manufacture in the context of a networked industry 4.0 requires the right quality assurance measurement and testing systems. Surface probes and analysis software must be able to flexibly and autonomously adapt to different measurement tasks.

NanoFocus AG together with the University of Duisburg-Essen carried out the three-year research project COSYRA, which was completed in the first half of this year. This provided valuable results which will influence the further product development of NanoFocus AG. Our research involvement was centered around the development of an analysis and control software to automatically connect a NanoFocus probe to a robotics system - an entirely new approach to production-related, intelligent quality control. This know-how was developed and tested based on the practical example of a fully automated inspection process using 3D printing.

Risks and challenges of project business

In spite of all the positive signs and milestones reached in the first half of 2016, we would nevertheless like to mention the unchanging risks involved in large-volume project business - not only for NanoFocus AG. Revenue distribution across years can vary great in such project business because high individual revenues depend on customer planning. Strategic pilot projects, which are extremely important for us to add further industries and create future opportunities, have very long preparatory periods and approval processes.

The second half of last year, 2015, sadly showed all too clearly how uncertain annual planning can be if as few as two major projects are delayed. As a result, NanoFocus pays special attention to securing long-term financing and ensure stable liquidity planning.

We will maintain our current measures to reduce costs, particularly against the background of the current difficult market environment, and the reticent willingness to invest. We are focusing our operative and financial resources towards ongoing lucrative projects in our core areas. At the same time, we are planning to expand our customer base to further reduce risky dependency on individual customers.

Positive outlook

Nevertheless, we are taking an optimistic view of the second half of the year and are sticking with our annual planning. As expected, we were able to overcome the difficulties experienced in 2015. The high number of incoming orders, the focus on current advance planning and the milestones reached in the first six months confirm to us that we are on the right path.

We identify good sales opportunities in all four business units – Automotive, Semi-conductor, Standard/Laboratory and OEM. We have created the conditions to further increase sales, and we will utilize all our efforts and care to harvest these opportunities.

Kind regards

Dipl.-Phys. Jürgen Valentin

Chief Technology Officer (CTO) and Spokesman of the Management Board

Share as at June 30, 2016

Price development and analyst evaluation

In the first half of 2016, the general mood on the stock markets was especially volatile due to the Brexit. At the start of the year, the price of the NanoFocus share traded in a lateral trend between EUR 3 and EUR 3.20. After the annual result for 2015 was published, the price fell slightly and then remained just above the EUR 3 threshold.

A minor capital measure at the end of May had a negative impact on the share price. The 10% cash capital increase to finance growth was placed in full at EUR 2.60. The total number of shares went up by 330,000 shares to a total of 4,530,000 shares. In June 2016, a larger sales order again resulted in pressure on the share, with the price briefly falling to EUR 2.14.

Since July, the price has experienced a lateral trend between EUR 2.60 and EUR 2.70. Before the capital increase in May, the analysts at Independent Research predicted a capital target of EUR 5.80 (previous year EUR 5.50).

Investor Relations

NanoFocus AG maintains a regular dialog with its shareholders and investors. It is in the company's interest to further increase public awareness of NanoFocus AG. As a result, investor meetings are held regularly. The business model and market opportunities of NanoFocus AG were introduced to existing investors and new interested parties at different analyst and investor conferences.

In March 2016, NanoFocus presented itself at a conference in Vienna, and in April at the 21st MKK conference in Munich. At the Annual General Meeting on June 29, all shareholders and stakeholders of NanoFocus AG were informed in detail of the 2015 financial year and business performance until the date on which the meeting took place. Questions were answered in the group as a whole or in individual meetings. For the first time, the company offered the opportunity to visit the company's newly rented headquarters in Oberhausen after the meeting in order to experience the measurement technology first hand. Shareholders, investors and stakeholders had the chance to contact the company at any time by phone, email or via their NanoFocus website contact to obtain information.

Business performance in 2016 so far

In the first half of 2016, NanoFocus was able to secure the strategically important order for a line-related measurement facility (at-line) with a premium automotive manufacturer in May. Delivery of this pilot system is planned for the third quarter of 2016. In terms of revenues, NanoFocus is performing above the comparative period in 2015 at EUR 4.9 million (+31%). As in previous year, the annual result

is still negative on this balance sheet date. The EBIT was also impacted by one-off removal costs for moving to a new site, as well as a higher material ratio. Since the first half of the year also saw proportionately more business in the semi-conductor area, the accumulated material ratio is still above the budget. Historically, the second half of the year tends to half greater revenues than the first half, so that the result can be expected to catch up accordingly. At EUR 4.1 million, incoming orders on the balance sheet date 6/30/2016 were still below own planning. By the date that this report was completed, this had risen to EUR 5.0 million and is nearly in line with the budget.

Outlook for 2016

NanoFocus AG is planning revenues at group level exceeding EUR 15 million and an EBIT margin of between 3% and 5% are planned. For the first time in the 2016 financial year, NanoFocus will compile Group accounts.

Breitmeier Messtechnik GmbH

We are expecting Breitmeier Messtechnik GmbH, which we acquired in 2015, to generate revenues in the year of the integration of at least EUR 2.0 million alongside a positive net result. Given the balance sheet date, at 6/30/2016, the company has only generated revenues of EUR 0.4 million and as such was still performing below internal planning. This was due to the integration measures in the first quarter. Changed operations commenced in the second quarter. Currently, incoming orders are developing very well and on the date on which the report was completed exceeded EUR 1.4 million and as such were in line with planning.

2. Subscribed capital

As at 6/30/2016, basic capital amounted to kEUR 4,200 and is split into 4,200,000 individual bearer shares with a converted value of EUR 1.00 each. In June 2016, a capital increase was initiated with the issue of 330,000 new shares, excluding the subscription right based on authorized capital. This increased basic capital in July 2016 by kEUR 330 to kEUR 4,530. The excess amount of kEUR 528 was added to the capital reserve.

3. Approved capital/Conditional capital

At the 2016 Annual General Meeting, approved capital for 2015 with a remaining value totaling kEUR 420 was canceled and re-issued after partial consumption. Approved capital for 2015 also included the capital measure initiated in June 2016 for the issue of 330,000 new shares. In accordance with the resolution of the General Meeting on 6/29/2016, and with the approval of the Supervisory Board, the Board of Directors is authorized to increase the company's basic capital either once or several times by 6/28/2021 up to a total of EUR 2,100,000.00 by issuing a total of up to 2,100,000 new individual bearer shares in one or several share issues in return for cash and/or investments (Approved Capital 2016).

4. Other provisions

	1234
Annual leave obligations	124,900
Outstanding invoices	6,740
Auditing and consulting costs	17,700
Inventor's bonus	2,209
Archiving costs	14,000
Warranties	87,950
Employer's Liability Insurance Association/ Compensation Levy for Non-Employment of the Severely Disabled	23,146
